

模試 第4回

(100点
80分)

[英 語 (リーディング)]

注 意 事 項

- 1 解答用紙に、正しく記入・マークされていない場合は、採点できないことがあります。
- 2 試験中に問題冊子の印刷不鮮明、ページの落丁・乱丁及び解答用紙の汚れ等気付いた場合は、手を高く挙げて監督者に知らせなさい。
- 3 解答は、解答用紙の解答欄にマークしなさい。例えば、

10

と表示のある問いに対して③と解答する場合は、次の(例)のように解答番号10の解答欄の③にマークしなさい。

(例)

解答番号	解 答 欄
10	① ② ③ ④ ⑤ ⑥ ⑦ ⑧ ⑨

- 4 問題冊子の余白等は適宜利用してよいが、どのページも切り離してはいけません。
- 5 不正行為について
 - ① 不正行為に対しては厳正に対処します。
 - ② 不正行為に見えるような行為が見受けられた場合は、監督者がカードを用いて注意します。
 - ③ 不正行為を行った場合は、その時点で受験を取りやめさせ退室させます。
- 6 試験終了後、問題冊子は持ち帰りなさい。

英 語 (リーディング)

各大問の英文や図表を読み、解答番号 1 ～ 45 にあてはまるものとして最も適当な選択肢を選びなさい。

第 1 問 (配点 6)

You visited your university's website and found an interesting notice.

Selection of Exchange Students to Go to Canada

Our university will send three exchange students to our sister school in Vancouver, Canada in August 2026. The schedule for selecting them is as follows.

2025-2026 Exchange Student Selection Schedule

July 12	Study Abroad Information Session
September 1	Orientation for Applicants
October 20	Written English Examination
November 5	Interview Examination in English
March 16	Orientation for Exchange Students

*You may hand in the application after the Orientation in September.

*The interview examination can only be taken by those who pass the written examination.

*The final orientation is for the students selected for the program.

Three students will be selected based on their current academic performance, their scores on a written English examination, and an interview examination in English. Our sister school also runs the same program for students from around the world. Going to our sister school will be a great chance to practice English and make a lot of friends from various countries. We

are sure that you will learn many new things. If you have any questions, please feel free to ask us. We are looking forward to receiving your applications. To contact us, please click [here](#).

問 1 The purpose of this notice is to 1.

- ① improve the students' English skills
- ② inform the students about a schedule change
- ③ introduce the sister school to the students
- ④ show how to choose students for the program

問 2 Before going to Canada, the students must 2.

- ① get good grades in their classes
- ② have an interview in Japanese and English
- ③ study other languages and cultures
- ④ take a lot of English written tests

問 3 The study abroad program will be a valuable opportunity because the students will 3.

- ① get important information in the orientation
- ② improve how they express themselves
- ③ meet students from other foreign schools
- ④ stay in Canada for free

第2問 (配点 8)

You need to prepare for a technology class on the future benefits of AI. You are reading this summary of a recent British podcast on the topic.

AI and the Future of Healthcare

On today's Health World Podcast, three technology experts discussed how AI is transforming healthcare. There was general agreement that AI will help doctors to diagnose and treat disease faster and earlier due to AI's strength in analysing vast quantities of data at speed. Two of the experts supported the independent action of AI in providing medicines and treatment, especially in poorer parts of the world where there are not enough doctors. The disagreement arose over whether doctors should always be part of the decision process. One of the speakers felt strongly that some decisions need an understanding of humans and their emotions, which AI does not have.

All felt that doctors would have more time to spend with patients as AI can take care of paperwork and administration. Medical research would also benefit as AI can run tests and check data more efficiently than regular computer programs, but they agreed that research should go through a final human check before it is released.

AI's reputation for using biased algorithms poses a problem. The news often features reports of AI using a poor balance of data that is different from real-world data. This could lead to poor medical decisions. Two of the speakers felt that government regulations and laws would take care of this problem, but one felt that this could always be an issue with AI and that more regulations need to be developed if AI is going to be used on patients. He felt that we weren't yet ready for large-scale AI in the medical world.

Finally, there were disagreements regarding timing and what percentage of decisions we can leave up to AI. However, all felt that if politicians, doctors and technology experts work together, AI can have a positive effect on the future of healthcare.

問 1 Which of the following did all of the speakers agree on? 4

- ① AI can demonstrate its ability to find out data that is hard to obtain.
- ② AI will be more useful in the future when it develops human emotions.
- ③ Poorer parts of the world could use AI alone when there were no doctors.
- ④ The use of AI would make earlier and speedier treatment available.

問 2 AI use will most likely 5.

- ① allow doctors to see more patients, or to spend more time with each patient
- ② be available on a large scale for medical care in the near future
- ③ give doctors a deeper understanding of patients and their problems
- ④ provide access to cheaper healthcare for people who need to see a doctor

問 3 One expert's opinion is that 6.

- ① AI is not yet ready to work independently without human assistance
- ② AI would not ever be useful because it uses unfair algorithms
- ③ medical research needs to be done by AI after the human check is finished
- ④ positive AI research results must always be reviewed by doctors

問 4 Which of the following points is mentioned in the podcast?

7

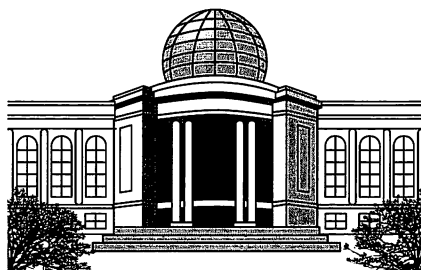

- ① AI's help in administration, cutting down consultation hours
- ② Doctors learning more about technology to improve care
- ③ Many experts cooperating to produce successful medical AI
- ④ Paperwork being done by doctors to avoid bias and mistakes

第3問 (配点 9)

You are getting ready for a school trip to the science museum with your classmates next week. You are reading an online blog post written by a high school student, Kei, who recently went there on a field trip.

One Day at the Science Museum

Last month, my classmates and I went on an exciting field trip to a large science museum in the neighboring city. I had been looking forward to it all week, and finally, the day arrived! As our class entered the massive building, the teachers encouraged us to explore where our interests led us.

Our first stop was the interactive physics exhibit. There were hands-on displays about how motion and energy work. I had the chance to create mini-tornadoes in a tube and even tried some interactive exhibits with magnets. They used metallic pieces and tiny marbles to demonstrate how magnets stick together or separate. The best part was definitely that we could touch and manipulate so many things, which made it a lot more exciting than an ordinary science class.

Next, we all gathered in a large auditorium for the live science show. This one really impressed me and my friends alike. The presenters showed us some incredible experiments, like freezing flowers with liquid nitrogen and then shattering them like glass. They also used electricity to create bright flashes of light and loud sounds that made us all jump in our seats. It felt more like something out of a magic show than a museum performance.

For some reason, the last exhibit I saw stuck in my mind. It involved rubbing your hands together over a net and you somehow couldn't feel it. It felt like

touching a very soft surface. It got me thinking a lot about how the human body sends signals to the brain when we touch things. By the end of the day, my friends and I were all exhausted. Not only had we been on our feet most of the day, but we had taken in so many new experiences.

In the end, I realized that there's so much to discover about the world around us and our bodies too. I hope we get a chance to visit the science museum again next year!

問 1 Kei's blog post also included student comments (①～④) describing the events in the museum trip. Put the comments in the order in which the events happened. 8 → 9 → 10 → 11

①

At one exhibit, we could rub our hands together over a net that we could not feel. That one really shocked my friends!

②

I can't believe how tired we were when it was all over! We were on the move almost all day.

③

I was really shocked when they froze the plants. The part with the liquid nitrogen was so cool!

④

The area with the magnets really grabbed my attention. I felt like I could finally understand what the teacher had explained to us in class last week.

問 2 During his stay at the museum, Kei did not experience

12

.

- ① bright flashes of light
- ② flowers breaking apart
- ③ frozen magnets
- ④ surprising loud sounds

問 3 At the end of the day, Kei was curious about

13

.

- ① magic tricks
- ② the next trip
- ③ the world around us
- ④ tornado formation

(下書き用紙)

英語(リーディング)の試験問題は次に続く。

第 4 問 (配点 12)

In your English class, you are writing an essay about the suggestions to improve this school. This is your most recent draft. You are now working on revisions after reading your teacher's advice.

How to Improve Classes for Future Students	Comments
I think our school is well run and offers a safe and healthy learning environment where most students are happy. Even so, I believe learning would be more effective if some changes were made to classes and lesson structure. First, I would like the school to offer more individual learning plans. For example, several students go to cram schools after school for the sole purpose of preparing for university entrance exams. ⁽¹⁾ <u>^</u> If there were intensive classes to meet individual needs here at school, it would benefit all students. Second, we should be able to learn in classes ⁽²⁾ <u>for ourselves</u>. Currently, we have classes based on ability only for math. However, if we could have discussions or do group work with students of around the same level, maybe in English, social studies and Japanese, we would feel more confident to speak up and be active in class. My final point is that assignments should be tailored to suit the ability of the individual. In other words, I want teachers to plan lessons with easier or more difficult content, depending on individual academic achievement. ⁽³⁾ <u>^</u> Everybody could feel more progress and motivation if the tasks were not too easy or too difficult. Our school is already a good school in terms of academic level. However, we are all individuals with strong points and weak points. I feel that if there were more optional classes and ⁽⁴⁾ <u>students were more equal</u>, it would be a more efficient and positive experience for all students.	(1) You need more explanation. Add something here to clarify what you mean. (2) It is not clear what you mean. Write a better expression here. (3) Add a connecting expression here. (4) The underlined part doesn't summarize your point well. Change it.
Overall comments: You have some very interesting ideas. I like that you have thought clearly and carefully about how to improve life for all students.	

問 1 Based on comment (1), which is the best sentence to add? 14

- ① Meanwhile, other students are having a hard time with self-study.
- ② On the contrary, there are students of poor level here.
- ③ On the other hand, teachers are not helping average students.
- ④ Yet learning can be more effective through self-study.

問 2 Based on comment (2), which would be a clearer expression? 15

- ① that are made for each of us
- ② where we can study on our own
- ③ with fewer students
- ④ with students suited to our academic level

問 3 Based on comment (3), which would be the best expression to use? 16

- ① For a start
- ② Furthermore
- ③ In this way
- ④ On the other hand

問 4 Based on comment (4), which is the best replacement? 17

- ① students were allowed to choose classes
- ② students were given the same assignments
- ③ students were helped in difficult classes
- ④ students were taught according to their level

第 5 問 (配点 16)

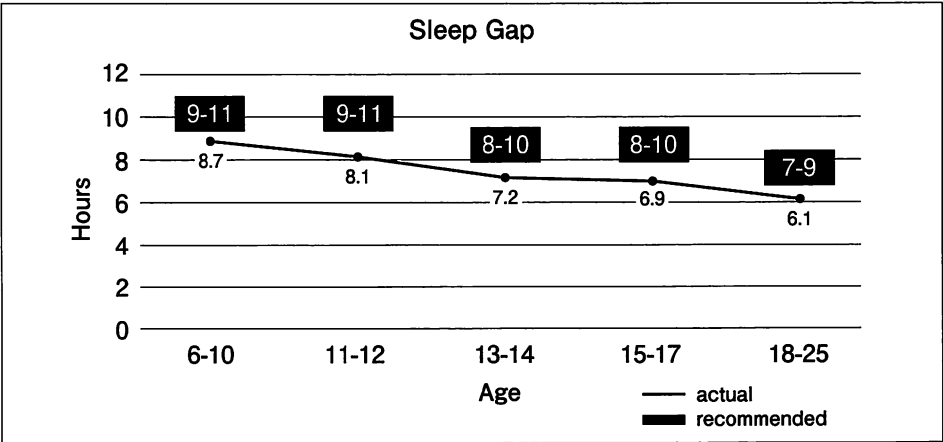

You are doing research on young people's sleep patterns. You found two articles.

Sleep Patterns among Teens

by Sharon Jones

While sleep is important for everyone, it is particularly important for teens, whose brains go through rapid and dramatic developmental changes. During sleep, neural connections are strengthened, and information is transferred from short-term memory to long-term memory. Therefore, insufficient sleep not only makes students feel tired during the day, but it also leads to poor school performance. Moreover, a good night's sleep activates cells in a part of the brain which is responsible for higher-level thinking such as reasoning and decision making.

Despite a set of research proving the benefits of sleep, most school-aged children and teenagers are not getting enough of it. According to a study in 2015, only 15 percent of teenagers get the eight and a half hours of sleep a night recommended by experts. The gap between the recommended sleep time and the actual sleep time on average shown in the graph reveals an alarming reality.

SleepFoundation.org の記事を参考に作成

A large-scale survey found that the amount of sleep teens have been getting has been consistently decreasing. In the early 1990s, about 52 percent of 15-year-olds and 36 percent of 18-year-olds reported sleeping seven hours or more per night. However, in the survey done in 2011-2012, the figures decreased to only 43 percent and 33 percent, respectively.

What makes the situation worse is teens' improper attitudes towards sleep. Many seem to think that it is cool to pull an all-nighter or stay up late. Young people need to know it is not a healthy habit and learn how to break the negative cycle.

Response to “Sleep Patterns among Teens”

by Ethan B.

Working as a school doctor, I have seen more and more students develop sleep-related issues over the last decade. Students nowadays are busier with homework, extracurricular activities, and other responsibilities. Besides, they now have social media, which has them on their computer screens and smartphones late into the night.

Lack of sleep has countless negative consequences. The decline in learning abilities, as mentioned by Ms. Sharon Jones, is a serious problem. When students report having difficulties in class or getting lower grades, they often have sleep issues. But I have seen even more behavioral and psychological problems. When students do not get enough sleep, they seem to become more aggressive and have trouble getting along with their friends. They also get easily stressed and anxious.

Ms. Jones' article showed that while those in my students' age group need at least eight hours of sleep every night, their average night sleep is over an hour less than the recommendation. Parents and teachers must do a better job educating teens about the importance of sleep. At the same time, we need to help our youngsters establish healthy sleep habits. Setting a consistent bed time and wake-up time is the first step. They should also create a relaxing sleep environment: dark, cool, and quiet.

問 1 Neither Sharon Jones nor the school doctor mentions

18

 .

- ① reduced safety due to a lack of sleep
- ② the change in the amount of sleep teens get
- ③ the effects of social media on teens' sleep
- ④ what happens in the brain during sleep

問 2 The school doctor mainly sees people aged

19

 .

- ① 6 to 10
- ② 11 to 12
- ③ 13 to 14
- ④ 15 to 17

問 3 According to the articles, sleep has good effects on young people's

20

 .
(Choose the best combination of options.)

- a complex thinking
- b food choices
- c mental health
- d relationship with their parents

Combinations:

- ① a, b
- ② a, c
- ③ b, c
- ④ b, d

問 4 Sharon Jones states that young people 21, and the school doctor states that they 22. (Choose a different option for each box.)

- ① biologically tend to sleep late
- ② have the higher risk of disease
- ③ hold the wrong views on sleeping insufficiently
- ④ need help from adults to improve sleep
- ⑤ tend to make quick judgments

問 5 Based on the information from both articles, you are going to write a report for homework. The best title for your report would be "23."

- ① How Poor Sleep Patterns Affect Teens
- ② Sleep Patterns Differ with Age
- ③ Teens' Lifestyle Change and Reasons to Stay Up at Night
- ④ Teens' Mysterious Brains Explained from the Viewpoint of Sleep

第6問 (配点 15)

You are taking part in an English reading club at school. Each student has been asked to read a short story in English, prepare notes and introduce the story to other students. You are preparing your notes now.

Grandmother's Secret Recipes

Rosa stood in the kitchen, carefully measuring flour for their grandmother's favorite meat pie. Her brother Marco was stirring the filling, while her sister Lisa kept looking nervously at the oven as it started to heat up. Then everything was ready. They placed the pie in the oven and set the timer. It had been years since the three siblings were together, and it all started with a simple discovery.

As children, Rosa and Marco would ask their mother to take them and their little sister to their grandmother's house. Rosa and Marco spent these weekends cooking with their grandmother, talking and laughing. They were close in age, but Lisa, being six years younger than Rosa, rarely joined them in the kitchen. She was more interested in playing outside.

As they grew older, life became busier for Rosa and Marco, but even though the visits to their grandmother's became less frequent, they always enjoyed their time together. The two of them would be with their grandmother in the kitchen while Lisa played in the garden or watched TV. Then, at eighteen, Rosa got accepted at a foreign university. They held a party at their grandmother's house and cooked together, not knowing that this would be their final gathering. Soon after Rosa left home, Lisa also started to be involved in her club activities, and it became difficult for all three to get together. As the years passed, the three of them found jobs, and drifted apart from each other and from their grandmother.

Ten years after their final cooking session, Lisa called her brother and sister with the sad news that their grandmother had passed away. Lisa and Rosa went to the funeral, but Marco was busy with work and could not attend. Even after the funeral, the two sisters hardly spoke to each other. Actually, more than five years had passed since Lisa had last met Rosa, so she didn't know what to say.

A year later, their mother was preparing to sell their grandmother's house and asked Rosa and Lisa to clean it out for her. They agreed, but it was a sad task.

While sorting through items, Lisa found an old recipe book hidden behind some files. She held it up and called out, "Rosa, do you remember this?" Rosa's eyes widened as memories flooded back.

They spent hours looking through the pages, reading the handwritten notes and seeing stains from old cooking sessions. Each recipe brought back a memory. There were notes like "Marco's favorite" next to the apple pie recipe or "Rosa helped chop the vegetables today" beside the soup recipe. For Rosa, these recipes were memories of their childhood. For Lisa, they were a chance to connect with her grandmother and reconnect with her brother and sister. She felt a mix of regret and hope.

Lisa and Rosa decided to try making some of the dishes, but they needed to invite Marco.

Marco had just gotten home from work when the phone rang. When he heard Lisa's voice, he was surprised because he hadn't heard from his sister in years. At first, he wasn't sure what to think. He had always wanted to make their grandmother's dishes but felt it might be too emotional. It wasn't just about cooking for him; it was about remembering someone they all missed. Lisa assured him they would do it together. Marco thought for a moment. The memories were happy but also made him feel sad because of the time they

had lost, and he felt guilty about missing the funeral. He knew it was important to his sisters, so he agreed to join them.

The smell of the meat pie baking filled the house. Marco and Rosa shared a look, both remembering their memories with their grandmother. Lisa was checking the oven, tapping her fingers on the counter. “I hope it turns out well,” she said quietly. Marco tried to reassure her, saying it would be fine, but Lisa wanted everything to be perfect. It was the first time she had made one of their grandmother’s recipes, and she felt a lot of pressure.

For Rosa, it wasn’t just about getting the taste right; it was about keeping memories and traditions alive. She and Marco had learned so much from their grandmother — not just about cooking but about family. Cooking together had been a way to keep the family close, sharing values and stories through the dishes they made.

The oven timer beeped. Taking a deep breath, Lisa opened the oven door and carefully took out the meat pie. It looked just like the one their grandmother used to make. Marco stared at the pie, thinking of old memories. Lisa was still worried about whether it tasted the same. Rosa smiled and said, “There’s only one way to find out.”

They each took a bite. The pie wasn’t exactly like their grandmother’s, but it was close enough to bring back memories, and they felt sad thinking of the years and opportunities they had lost. The three of them sat in silence for a few moments. Then Lisa’s eyes filled with tears as she realized they had succeeded. She whispered, “We did it.” Rosa reached over to squeeze her hand, and Marco nodded, feeling a peace he hadn’t felt in a long time. He suggested they should do this more often. Rosa agreed, seeing this as a way to keep their family traditions alive.

For Lisa, this moment was more than just cooking; it was about being part of something she had always felt disconnected from. She finally found her

place in the family tradition, realizing that it wasn't just about the recipes but about being with her siblings and honoring their grandmother's memory.

From that day on, the three of them made it a habit to meet every month and cook together. Lisa even started adding her own notes to the recipe book. The tradition of family cooking was preserved, keeping the memory of their grandmother alive in every dish they made.

Your notes:

Grandmother's Secret Recipes

Story Outline (in Adulthood)

Rosa and Lisa attend their grandmother's funeral.

↓

24

25

26

27

The siblings successfully recreate the meat pie.
Lisa feels connected to her family.

About Lisa

- Age when finding the recipe book: 28
- The siblings' connection with her:
Rosa: 29 .
Marco: 30 .

Key moments in the story

- "The three of them sat in silence for a few moments."
They were quiet because they 31 .
- The lesson of the story is that for good family relationships, 32 .

問 1 Choose **four** out of the five options (①～⑤) and rearrange them in the order they happened. 24 → 25 → 26 → 27

- ① Lisa finds the recipe book and shows it to Rosa.
- ② Marco thinks about his memories and feels ashamed.
- ③ Rosa and Lisa read through the recipe book together.
- ④ The siblings discuss how to reuse their grandma's house.
- ⑤ The sisters decide to tell Marco about their plan.

問 2 Choose the best option for 28.

- ① late 10s
- ② early 20s
- ③ late 20s
- ④ early 30s

問 3 Choose the best options for 29 and 30.

- ① Accepted the invitation though feeling uncertain and upset
- ② Called everyone with the news of their grandmother's passing
- ③ Often cooked together at grandmother's house
- ④ Opened up to Lisa at the funeral
- ⑤ Reconnected while cleaning the house

問 4 Choose the best option for

31

.

- ① felt hope for their renewed relationship
- ② felt regret about their years of separation
- ③ were uncertain about the attempt to reconnect
- ④ were worried about getting the recipe right

問 5 Choose the best option for

32

.

- ① cooking is a great opportunity to bond
- ② long family traditions are the key
- ③ shared activities are more important than individual interests
- ④ sharing values while being together is essential

第7問 (配点 16)

You are preparing a presentation for your science club, using the following passage from a science website.

Carbon Offsets: Good or Bad?

In recent years, climate change has become a growing problem for people everywhere on the planet. Scientists are searching for new ways to protect the environment. In fact, innovations, like electric cars, or wind and solar power, are improving every day. However, even with better technology, other kinds of solutions are needed. One such solution is called carbon offset.

Carbon offsets are actions that indirectly help reduce the amount of carbon dioxide (CO₂) in the air. People or companies can pay for these actions to balance out the CO₂ they produce. There are various projects, from growing plants to giving money for the development of more eco-friendly technologies. For example, a company which makes smartphones can pay to plant trees. First, they figure out how much CO₂ they create when they make smartphones. Then, they pay to plant enough trees to remove that same amount of CO₂ from the air. In this case, the action of paying to plant the trees is the carbon offset. Carbon offsets do not prevent companies from producing CO₂. However, it is a method that can help address climate change while we work on new solutions.

One example of a carbon offset program is the Delta Blue Carbon project in Pakistan. This project focuses on planting a special kind of tree, the mangrove tree. Mangrove trees, which grow in the area between river and sea, can take 5-10 times more carbon from the air than other types of trees. One factor that enables them to do this is their rapid growth, but there is another secret. The CO₂ taken from the air in mangrove leaves moves to the roots, and it is trapped there within a layer of mud. Investing in environmental actions that aim to enhance this kind of CO₂ processing by ocean are also called blue carbon offsets.

One benefit of carbon offsets is that they give us a little more time to develop new technologies. For example, airplanes still use fossil fuels. These fuels release a lot of CO₂. In fact, the airline industry creates about 2.5% of all of the CO₂ in our air. The world needs air travel, but we also need to do something about its effect on climate change. Until we create new technologies like electric airplanes, people and airline companies can pay for carbon offsets.

Carbon offsets can also benefit poor regions of the world at risk of being affected by climate change. One study has shown that about 90% of the world's poorest places depend on the forests for their needs. Carbon offset programs can benefit these places when they protect the land and create jobs for local people. One environmental project in Africa is protecting over 1,500 square kilometers of forest. At the same time, it is providing jobs for over 130 people.

While carbon offsets can be helpful, they also have some disadvantages. One problem is that the rules concerning carbon offsets are different in different countries and regions. The most popular market for carbon offsets is in the European Union. Other markets in parts of Asia and the United States are growing. Some of these places have stricter rules than others. This makes it difficult to understand the value of different carbon offset programs.

Another problem with carbon offsets is "greenwashing." Greenwashing is the practice of companies pretending to care about the environment. For example, one large oil company set up a carbon offset program in China. The company said they would teach farmers how to reduce greenhouse gasses when growing rice. However, in reality, many of the farmers already grew rice this way. The oil company's carbon offset program turned out to make little difference. Thus, greenwashing could trick people into believing a company is green. The real goal, however, should be to protect the environment.

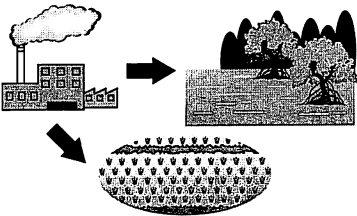

Lack of harmony between a carbon offset project and the local community is reported in Peru. In this project, the local government suddenly designated some particular areas in the rainforest as protected areas, and forced the local residents there to move to other places. Some residents unexpectedly lost their farms or jobs, and not everyone thinks this is fair.

What we have to remember is that carbon offsets are just one solution to

the current situation. Some researchers argue that in reality they cancel out only a small amount of the CO₂ in the air. To have a better chance at slowing climate change, companies also need to use clean energy, protect forests and oceans, and create less waste. Only with bigger changes can we make the world healthy and safe for the future.

Presentation slides:

Carbon Offsets: Good or Bad?

1

Examples

Successes:

- trees in Pakistan
- 33

Failures:

- farming in China
- rainforest in Peru

2

Benefits

Carbon offsets can... 34

A: be a way to face the issue of climate change.

B: be useful until new technology develops.

C: protect the forests.

D: reduce the cost of energy.

E: support some poor communities.

3

Disadvantages

Some carbon offsets can be a problem because...

· 35

· 36

4

How Carbon Offset Programs can be Improved

37

5

Closing Remark

38

6

問 1 What is the second carbon offset success in Slide 2? 33

- ① airlines in Europe
- ② cars in America
- ③ jobs in Africa
- ④ wildlife in Asia

問 2 Which is an error you found on Slide 3? 34

- ① A
- ② B
- ③ C
- ④ D
- ⑤ E

問 3 Choose two options for Slide 4. (The order does not matter.) 35 · 36

- ① they are available only in the northern hemisphere.
- ② they are harmful for the airline industry.
- ③ they can be used for cheating.
- ④ they can cause trouble for local residents.
- ⑤ they pose a danger to forest animals.

問 4 What can be inferred about how to improve carbon offset programs for Slide 5? 37

- ① Carbon offset programs should focus more on developing electric cars and wind power.
- ② Carbon offset programs should provide poor farmers with the technology to produce more food.
- ③ Creating international rules would help people understand and trust the carbon offset system.
- ④ Reducing the price of carbon offsets will lead to cleaner air for everyone.

問 5 Choose the most appropriate remark for Slide 6. 38

- ① Carbon offsets help companies, but they do little to help individuals reduce CO₂.
- ② Carbon offsets help prevent climate change, but do not do enough by themselves.
- ③ Carbon offsets require the planting of special trees, so they are too expensive.
- ④ Carbon offsets should be banned in some developing countries which have native tribes.
- ⑤ Carbon offsets turn our interest to the great possibilities of the ocean.

第 8 問 (配点 18)

You are working on an essay about whether the government should put a higher tax on unhealthy food. You will follow the steps below:

Step 1: Read and understand various viewpoints about tax on unhealthy food.

Step 2: Take a position on putting a higher tax on unhealthy food.

Step 3: Create an outline for an essay using additional sources.

[Step 1] Read various sources

Author A (Parent)

As a parent, I'm trying to encourage my children to make the right choices as they grow up. Of course, I worry about their health, and I try to provide healthy food for them. However, now they are teenagers, they spend time with their friends and buy their own snacks and school lunches. I hope that through health education at school and my positive influence, not by the effect of high taxes on the cost of food, they will learn to make good choices. We should educate them, not try to force their decision. That's why I disagree with these taxes — children should make good decisions themselves.

Author B (Doctor)

The scientific evidence shows that eating too many calories leads to poor health and shorter lives. This puts a cost on society as well as individuals as health care costs go up. I believe that putting taxes on unhealthy food will help people to make better choices about their food. Currently, junk food is often cheaper than healthy food, and this is one reason most people buy junk food. It is time to bring in these taxes to improve the health of the whole country and to enable us to better target diseases not caused by obesity.

Author C (Supermarket manager)

As a major supermarket chain, we stock a wide range of foods for people to choose from. We try to keep our prices low, but many families must shop carefully to match their food budget. Unhealthy foods are often sold at relatively low prices, and raising the price of such foods by taxing has a larger impact on poorer people. We provide advice and recipes for families to choose healthy options, but it should be the choice of those families. Sometimes, people want to eat sweet or high-calorie food as a treat. They should have the freedom to do this.

Author D (PE teacher)

The amount of physical activity that children do goes down every year and the number of overweight children increases. This is due to many factors. One reason is that children spend more time playing indoors on digital devices. However, the main factor is that children take in more sugar than in the past, especially in soda. In fact, boys between fourteen and eighteen take in more sugar than any other group. Sugar taxes are used in over fifty countries around the world, and these have had a positive effect on the health of children.

Author E (Student)

We recently studied this, and we found that taxes on unhealthy food can have a positive effect. It is difficult to just raise taxes on “unhealthy food,” but taxes on sugar in some countries have been effective. One reason was that people started buying low-sugar options (for example, diet sodas, or low sugar snacks). However, the biggest effect was on the manufacturers. Many food producers in these countries changed the recipes of their original products. This helped them to sell a product that was healthier for customers.

問 1 Both Authors B and C mention that 39 .

- ① poorer people are usually too busy to try to cook healthier food recipes
- ② raising prices of unhealthy food will mean that poorer people can be healthier
- ③ reducing the calories people consume will lead to a reduction in the cost to society
- ④ unhealthy food is generally bought at a lower cost than healthy alternatives

問 2 Author E implies that 40 .

- ① companies reduce the cost of producing their low-calorie products in order to make more profit
- ② manufacturers in high-tax countries try to move from their original locations
- ③ putting a tax on junk food has had a positive effect in nearly every case that was tested
- ④ putting taxes on the sugar content of drinks leads the manufacturers to produce healthier products

[Step 2] Take a position

問 3 Now that you understand the various viewpoints, you have taken a position on putting a higher tax on unhealthy food, and have written it out as below. Choose the best options to complete [41] – [43]. (You must have all of [41] – [43] correct to get points.)

Your position: The government should not put a higher tax on unhealthy food.

- Authors [41] and [42] support your position.
- The main argument of the two authors: [43].

Options for [41] and [42] (The order does not matter) :

- ① A
- ② B
- ③ C
- ④ D
- ⑤ E

Options for [43] :

- ① Choosing a diet that is healthy through education is the strongest way to make changes
- ② Discussing healthy food in class helps to make a balance between healthy and unhealthy menus
- ③ Parents should be educated so that they provide healthy food for their children
- ④ People should be able to choose what to eat according to their own decisions

[Step 3] Create an outline using Sources A and B

Outline of your essay:

Putting a higher tax on unhealthy food is not a good idea

Introduction

While a number of countries have increased taxes on unhealthy food or food with a high sugar content, this is not the best way to encourage healthy eating.

Body

Reason 1: [From Step 2]

Reason 2: [Based on Source A] (44)

Reason 3: [Based on evidence (45) from Source B]

Conclusion

The government should not put a higher tax on unhealthy food.

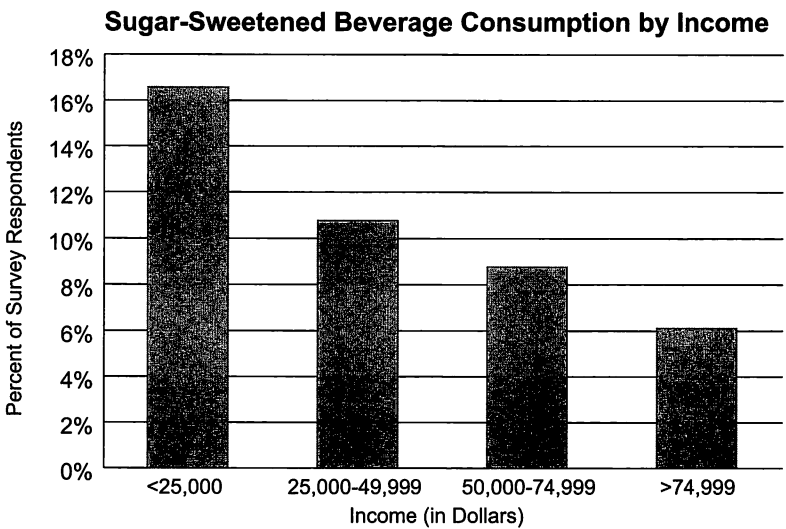

Source A

While increasing the cost of unhealthy foods through taxes can force customers to change their shopping and eating habits, it is not the only way. Rather than charging more for junk food, it is better to motivate people to change through reducing the cost of healthy options and by giving rewards. Governments could help to lower the cost of fruits and vegetables by paying some of the cost themselves. At first, this seems expensive, but it is not so. As the population eats healthier food, fewer people become sick because of bad diet. As a result, the government may even save money. Another method of encouraging healthy eating is by giving rewards. Supermarkets in some countries give a free piece of fruit to children who come shopping with their parents. It is fun for the child to choose different fruit rewards, and a

survey showed that this helped to motivate children to eat more fruit instead of chocolates and cookies.

Source B

A US survey showed the percentages of adults in different income groups who responded that they consume sugary drinks more than 2 times daily. The survey clearly shows that there is a relation between the percentages of people who take in sweetened drinks and their income levels.

問4 Based on Source A, which of the following is the most appropriate for Reason 2? 44

- ① Allowing children to choose the food that the family will eat can motivate parents to make better choices.
- ② Focusing on reducing health costs is an effective way of motivating people to change their unhealthy diets.
- ③ Giving people free choice while at the same time offering a positive reason to choose healthy food is the best strategy.
- ④ If some healthy food is given for free and unhealthy food is made more expensive, people will choose a healthier diet.

問5 For Reason 3, you have decided to write, "Putting higher taxes on unhealthy food has a negative influence on the poorer people in society." Based on Source B, which option best supports this statement? 45

- ① Higher taxes on sugar-sweetened drinks will lead to fewer people drinking them. This will in the end require another way for the government to earn money.
- ② More than 90% of the people in the highest income group don't consume sweetened drinks more than twice a day. This shows that richer people don't pay more tax.
- ③ The percentage of people who consume sugary drinks more than twice a day is the largest in the lowest income group. The proportion of income spent on these drinks will increase more for this group than for other groups.
- ④ The percentage of those in the highest income group who drink sugary drinks more than twice a day is less than half that of the lowest income group. It could be said that poorer people tend to have more health problems.
